Andreas Lenz

LORE

You are an organic on board an exploratory vessel controlled by an AI. This **AI does the assessment of planets to be harvested for resources** and then destroyed on its own, but always requires an organic to verify commands.

One day the vessel **flies through an ion storm** which messes up the systems making the AI change its directive now **destroying all planets with life** that it encounters. You as the Organic attendant on board must still **verify the commands**, because otherwise the AI will stop dispensing food to you.

You now must watch as the AI flies from system to system destroying all organic life just to keep getting fed by the AI.

Your goal is to **find a way to disable or destroy the AI** by tricking its own systems.
